The following instructions guide you in adding the temperature module to the ADC AdView™ Modular Diagnostic Station. Included in the Temperature Module Kit are the temperature module, oral temperature probe, and a box of probe covers. The temperature module attaches to the top of the BP module.

It is made up of the following two pieces:

- Part A with the display.

- Part B, the probe holder, which holds the temperature probe and probe cover box.

### Adding the Temperature Module

1. Using the power button on the right side of the BP module, ensure that the ADC AdView™ Modular Diagnostic Station is turned off.

2. Remove the cover plate from the top of the BP module.

3. Slide part A of the temperature module along the guides on the top of the BP module from front to back until it snaps into place. All the segments of the temperature module display will light when the modules have been connected correctly.
4. Attach the temperature probe connector to part B as follows: with the black surface facing downward, hold the probe connector end against the notches on the probe holder, as shown in red (step 1 shown below).

5. Rotate the connector upwards until it snaps securely into place (step 2 shown above). The black surface faces outward and the cord extends upward.

6. Slide part B onto part A as shown (this connects the temperature probe connector to the temperature unit connector), and insert the temperature probe into the well.

7. Turn the device on using the power button on the right side of the BP module. At the end of the start-up sequence, the temperature module display will be blank except for the appropriate temperature unit icon (°F or °C). A short beep indicates that the ADC AdView™ Modular Diagnostic Station is ready.

Note: If the temperature module does not appear to be working properly, cycle the power several times using the power button on the right side of the BP module. This will “synchronize” all the modules. The modules are synchronized when, after you turn the power on, all segments on all modules display light simultaneously for 3 to 5 seconds, followed by a short beep, and all displays go to their “ready” state (BP: battery icon and middle segments of the systolic value are lit; Temperature: appropriate temperature units icon is lit; Pulse Oximetry: the %SpO2 icon is lit).

Refer to the ADC AdView™ Modular Diagnostic Station user’s manual for operation, maintenance and safety instructions.
